(54) SECURITY SYSTEM FOR INDIVIDUALLY PROCESSING INFORMATION OF EXTERNAL NETWORK AND INFORMATION OF INTERNAL NETWORK, AND ITS CONTROL METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a security system wherein information of an external network and information of an internal network are processed in different storage devices.

SOLUTION: This system includes a connection part 30 connecting the external network to which the Internet or the like is connected, the internal network to which a short-distance communication network is connected, and a computer system, a security circuit part 20 which selects one of the external network and internal network connected to the connection part 30 and controls it so as to communicate with the computer system, and a storage part 10 which processes information exchanged by the external network and information exchanged by the internal network in mutually different places under the control of the security circuit part 20. Consequently, processing is performed in space different from the information of the external network.

LEGAL STATUS

[Date of request for examination] 08.06.2000

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]
